

HOSPITAL MANAGEMENT SYSTEM

Super Admin / Admin - Simple Reporting Structure

CH Sharif and Saeed Hospital | Prepared by iSysware

Simple management reporting - enough visibility without an overloaded report menu.

Design Goal

School Management System style: simple report menu on the left, proper filters on top, export buttons on the right, and one clean table below. Keep the reporting easy to read and easy to manage.

Portal Rule

Management portal: consolidated operational and financial oversight. Admin and Super Admin have the same normal report set.

1. Recommended Report Menu

Report	Purpose / Main Columns
1. Management Summary	Hospital overview: total billing, collections, outstanding, expenses, active admissions, occupied beds, pending settlements. Summary only.
2. Billing & Collection Report	Invoice No, patient/payer, department, gross, discount, net, collected, outstanding, payment method, Collected By.
3. Outstanding / Panel Report	Self-Pay + Panel outstanding, partial/unpaid invoices, panel/company, due amount, status.
4. Admission & Bed Summary	Admissions, discharges, active patients, department/ward, occupied/available beds, Hospital due, discharge status.
5. Expense Report	Date, category, amount, method, details/reference, Entered By.
6. Balance Sheet & Account Settlements	User-wise opening/petty cash, cash collections, expenses/refunds, expected cash, physical cash, variance, submitted/accepted/remaining.
7. Staff / Payroll / Doctor Commission	Staff/doctor, attendance days, salary basis, payroll amount, doctor commission amount, status.
8. Inventory / Pharmacy Summary	Simple management summary only: purchases/stock movement, low stock/expiry, Pharmacy request/clearance summary. Detailed operational ledgers remain in their own modules.

2. Top Filters for Each Report

Report	Top Filters
Management Summary	From Date, To Date, Department, Portal/User
Billing & Collection	From Date, To Date, Department, User/Cashier, Payment Method, Payment Status, Panel
Outstanding / Panel	From Date, To Date, Payer Type, Panel, Department, Status
Admission & Bed	From Date, To Date, Department, Doctor, Ward, Admission/Discharge Status
Expense	From Date, To Date, Category, Payment Method, Entered By
Balance / Settlements	From Date, To Date, Portal, User, Settlement Status
Staff / Payroll / Commission	Payroll Period, Department, Staff/Doctor, Status
Inventory / Pharmacy Summary	From Date, To Date, Category/Department, Status

3. Recommended Reporting UI

UI Area	Recommended Pattern
1. Report Title Bar	Report name + short description.
2. Top Filter Row	Date range + 3-5 relevant dropdowns. Keep filters in one horizontal row where screen width allows.
3. Action Buttons	Filter / Refresh + Reset + Excel + PDF + Print.
4. Optional KPI Strip	Only 3-5 important totals; do not overload every report with cards.
5. Main Data Table	Clean grid like the school system reference; sortable, searchable, paginated.
6. Row Action	View only where detail drill-down is useful. Avoid too many action buttons.

Simple Layout Example

Report Name

Date From | Date To | Department/User/Status | Payment Method/Panel (where relevant) | **Filter** | Reset

Excel | PDF | Print

Main report table with totals at the bottom. Use KPI cards only on summary reports.

4. Final Notes

Note

Super Admin and Admin can use the same normal report structure. Protected Super Admin account restrictions are security rules, not a separate reporting menu.

Note

Admin/Super Admin reporting should focus on management visibility; do not duplicate every Front Desk and Admission operational report as separate menu items. Use drill-down from summary rows when detail is needed.

Note

Balance Sheet and Account Settlements here are management oversight/consolidated views. Individual Front Desk cashiers still have their own personal Balance Sheet and Account Settlement screens.
